

HOT DIPPED GALVANIZED GATES

AGRICULTURAL

PRODUCT HIGHLIGHTS

FEATURES:

- Affordable, high quality gates
- Easy installation
- Variety of sizes
- Exceptional corrosion resistance
- Hot Dipped Galvanized after welding
- 2 year prorated warranty

VES Environmental Solutions, LLC. Hot Dipped Galvanized Gates are the most affordable high quality gates available today. These gates were designed with the farm in mind. All our product is hot dipped galvanized after welding. This gives an exceptional corrosion resistant product that has 2-3 times the coating of regular pipe. On the 8' gates we have a double welded reinforcement strap and for 10' and up there are two sets. All gates come with 2 heavy duty threaded hinges and 2 female weld-on hinge tubes along with lock chain and chain support.

Gates can also be purchased without the hinge end attached allowing for custom fit in the field. Simply cut the gate to fit your application and weld on the hinge end. We recommend zinc spray paint to cover the welds if cutting gates.

The DS1502 – DS1507 gates are our adjustable series of gates. These gates come with the latch side unattached to the gate. This allows the installer to cut the gate off at the exact length required and then weld on the latch end tube. This allows for a customize fit for every application.

Available in a wide variety of gauges, lengths, spacing, painted or spray on zinc and custom designs. All products are designed and inspected by the VES team of engineers.
