- Variety of sizes
- Exceptional corrosion resistance
- Self Opening
- Hot Dipped Galvanized after welding
- 2 year prorated warranty

VES Environmental Solutions, LLC. Hot Dipped Galvanized Headlocks are the most affordable, high quality headlocks available today. These headlocks were designed with the dairy farm in mind. Our standard headlocks are hot dipped galvanized after welding which provides an exceptional corrosion resistant product that has 2-3 times the coating of regular zinc spray on welded headlocks. The frame work comes with heavy gauge steel, additional extended swing arm brace for strength. Our balanced pivot swing arms can be locked in place, individually release with a flipper or full release with a twist of the top bar. A variety of cost effective hot dipped galvanized mounting brackets with hardware are available for easy installation into any dairy application.
